

Starke Arvid Waste bin tipping frame

One of the easiest ways to empty a Waste bin

The waste bin tipping frame makes your job easier when it comes to emptying wastebins. It's used together with the lifting forks on your machine. The operator can easily empty all wastebins without ever leaving the driver's seat.

Waste Bin Tipping Frame – built for the job

When legislation, municipal contracts or environmental requirements demand increasingly strict sorting of construction waste – and the number of containers for different materials keeps growing – our waste bin tipping frame is the smart solution for quick, simple, and cost-effective sorting.

Thanks to a clever locking system, specially designed for Starke Arvid's 400L wastebin, emptying is fast and smooth. Wastebins are emptied safely, securely, and without damage – say goodbye to crushed bins and unnecessary replacements.

All you need is a machine with standard lifting forks. Together with Starke Arvid's wastebins, this becomes the industry's fastest, simplest, and most cost-

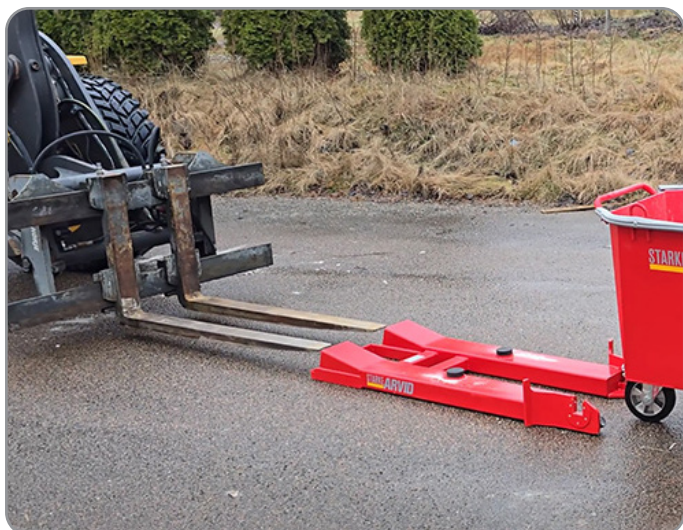

efficient system for construction site waste sorting. The tipping frame also works perfectly in industrial environments – just use a standard electric forklift to get the job done. It's a concept fully in line with Starke Arvid's way of working: efficient, ergonomic, and economical.

Wastebins emptied without leaving the cab

The tipping frame is inserted under the wastebin and guided into position by the wheel stops. As the frame is lifted straight up, it locks automatically onto the axle of the wastebin.

To empty the bin, you simply tilt the frame forward slightly – the bin will tip on its own and the contents are released. Once emptied, just tilt the frame back again and the bin returns to its original position. No shaking or rough handling needed – just smooth and steady.

Once emptied, lower the bin to the ground, reverse the machine, and the tipping frame is ready for the next bin.

The waste bin tipping frame is easily picked up directly with the lifting forks.

The waste bin tipping frame is driven in under the wastebin to lift it up. It locks securely around the wastebin's wheel axle.

Sorting and emptying the wastebins is easy with the waste bin tipping frame. Tilt the machine's lifting forks, and the tipping frame gently tips forward to empty the contents.

Easy waste disposal thanks to the smooth emptying of wastebins using the waste bin tipping frame.

Technical specifications

Art.no:	78000
Length:	1470 mm
Width:	610 mm
Height:	180 mm
Weight:	58 kg
Fork pocket dimensions:	150 mm x 70 mm
Fork pocket dimensions:	190 mm x 90 mm (on request)
Maximum fork length:	1200 mm
